

## KRUUSE Promilene

**Monofilament:** For smooth passage through tissue and high tissue compatibility

**Synthetic:** For minimal tissue reaction

**Non-absorbable:** Provides permanent tensile strength

KRUUSE Promilene sutures are coloured blue for easy identification during surgery. The monofilament and synthetic properties of the suture give a smooth surface, minimal tissue reaction and decreased incidence of infection and trauma. The suture is resistant to repeated bending.

**Absorption:**

- Non-absorbable

**Chemical composition:**

- KRUUSE Promilene is composed of an isotactic crystalline stereoisomer of polypropylene, a polymer of propylene

**Colour:**

- Blue

**Indications:**

KRUUSE Promilene is commonly used in soft tissue approximation and ligation where a permanent support is needed. Areas of use include:

- Skin closure
- Ophthalmic surgery
- Vascular and cardiovascular surgery
- Neurosurgery

**Range:**

- USP 4-0 to 2
- EP 1.5 to 5

**Sterilization method:**

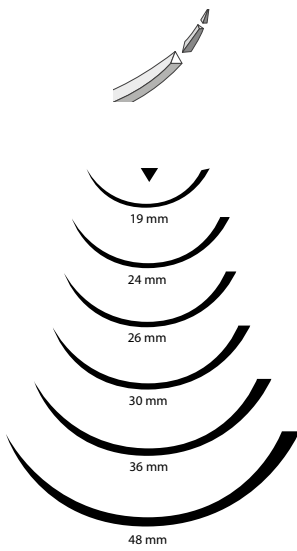

- EO

**Packing:**

- Boxes of 18 peel packs

## KRUUSE Promilene
