

KRUUSE Physio

Canine training tools for less injuries, better balance a stronger core, and improved well-being

Core strengthening

■ Protects limbs and back from injuries

Balance training

■ Improves reactions on uneven surfaces

Improved proprioception

■ Is key to avoid injuries

Sensory and perceptual stimulation

■ For better positioning of limbs

Different tools and sizes suitable for all dog breeds

The KRUUSE Physio portfolio consists of canine training tools for core strengthening, balance training, encouraging weight bearing and increased proprioception for both novice and advanced training.

A strong core equals well-being

Both older dogs and dogs in rehabilitation will benefit from core training, which also improves general well-being.

Improved balance and reactions

Training of balance and the proprioceptive understanding (limb-body-balance) enables the dog to react correctly on unexpected uneven surfaces. Balance training is beneficial for disciplines like agility.

More body awareness - less injuries

The tactile buds on the training tools ensure sensory stimulation for the dog, thus improving body awareness and resulting in fewer injuries.

KRUUSE

Balance

Physio Podo

The dog should always be under supervision when using the Physio tools.
