

## KRUUSE Krupramid

**Pseudo-monofilament:** For smooth passage through tissue, high tissue compatibility and excellent handling properties

**Synthetic:** Minimal tissue reaction

**Non-absorbable:** Provides permanent tensile strength

KRUUSE Krupramid sutures have a twisted structure and are unique in that they are made of many fine inner nylon fibers which are enclosed in a smooth nylon outer shell. As a result, KRUUSE Krupramid sutures feel smooth like monofilament sutures but they tie better, with fewer knots, and stay tied even with short tag ends.

KRUUSE Krupramid is very strong and has excellent handling properties and knot security. It gives permanent tissue support with high flexibility.
